

# Fourth Fokker50Freighter delivered to MiniLiner in Bergamo, Italy

FOR IMMEDIATE RELEASE

Schiphol Airport, the Netherlands

August, 2009

AircraftConversions, sole manufacturer of the FAA and EASA certified full Fokker50Freighter is pleased to announce that the fourth Fokker50Freighter was delivered to MiniLiner today.

“The Fokker50Freighter more than exceeds our expectations; its lucrative payload/range capabilities, operating performance, speed and unmatched cargo cabin configuration has made the Fokker50Freighter with its almost 100% dispatch reliability an all-new-generation workhorse for decades to come to add to our fleet of Fokker F27s” says Giuseppe Berlusconi, CEO of MiniLiner.

The Fokker50Freighters have fully proven to be rugged high performance workhorses, to be the yardstick for reliability and productivity, as well as the capability to operate in any kind of terrain or climate condition. The 7+ ton/kgs full-freighter features a 60 cu.m. and 15.45 m. long cargo compartment

and a reinforced floor allowing loads up to 488 kgs / sq.m. This provides the perfect fit for a reliable low-cost solution to introduce high frequency regional services by keeping capital cost low. When paired with proven low DOCs and DMCs, this creates an entirely new operational life for bulk cargo operations and courier/express/postal services.

The actual number of (full) freight conversion orders is ten plus five options; the backlog is 3.
